

Put a useful idea on the bench.

Science, technology, open hardware, and inventive builds.
Partnerships centered on useful work, with the funding visible.

Reference photograph of measurement tools. Not a Meteor Makers build or test.

Three possible formats

01 Topic collection

Support a useful evergreen question with a clearly identified collection supporter.

02 Practical guide series

Support linked explainers, project references, setup checks, and troubleshooting notes.

03 Build feature

Propose a source-backed project feature with a visible sponsorship label and technical substance.

Start a private inquiry: meteormakers.com/sponsor

A clear scope. An honest label.

Useful content first. Funding does not buy a verdict.

What a proposal should include

The topic, intended format, organization and product context, preferred timing, available documentation, image permissions, and any budget or constraints you want considered.

What must be agreed before booking

Deliverables, publication dates, the disclosure label, factual-review boundaries, price and payment terms, usage rights, revisions, and cancellation or postponement conditions. An inquiry does not reserve a placement.

How paid work is identified

Paid features must display Advertisement or Sponsored by the named organization on the listing and near the top of the page. Funded collections identify their supporter at the heading. Relevant supplied equipment and affiliate relationships are disclosed.

What is not for sale

Positive editorial verdicts, undisclosed endorsements, suppression of limitations, or invented test results. There are no traffic, search-ranking, membership, sales, or conversion guarantees.
